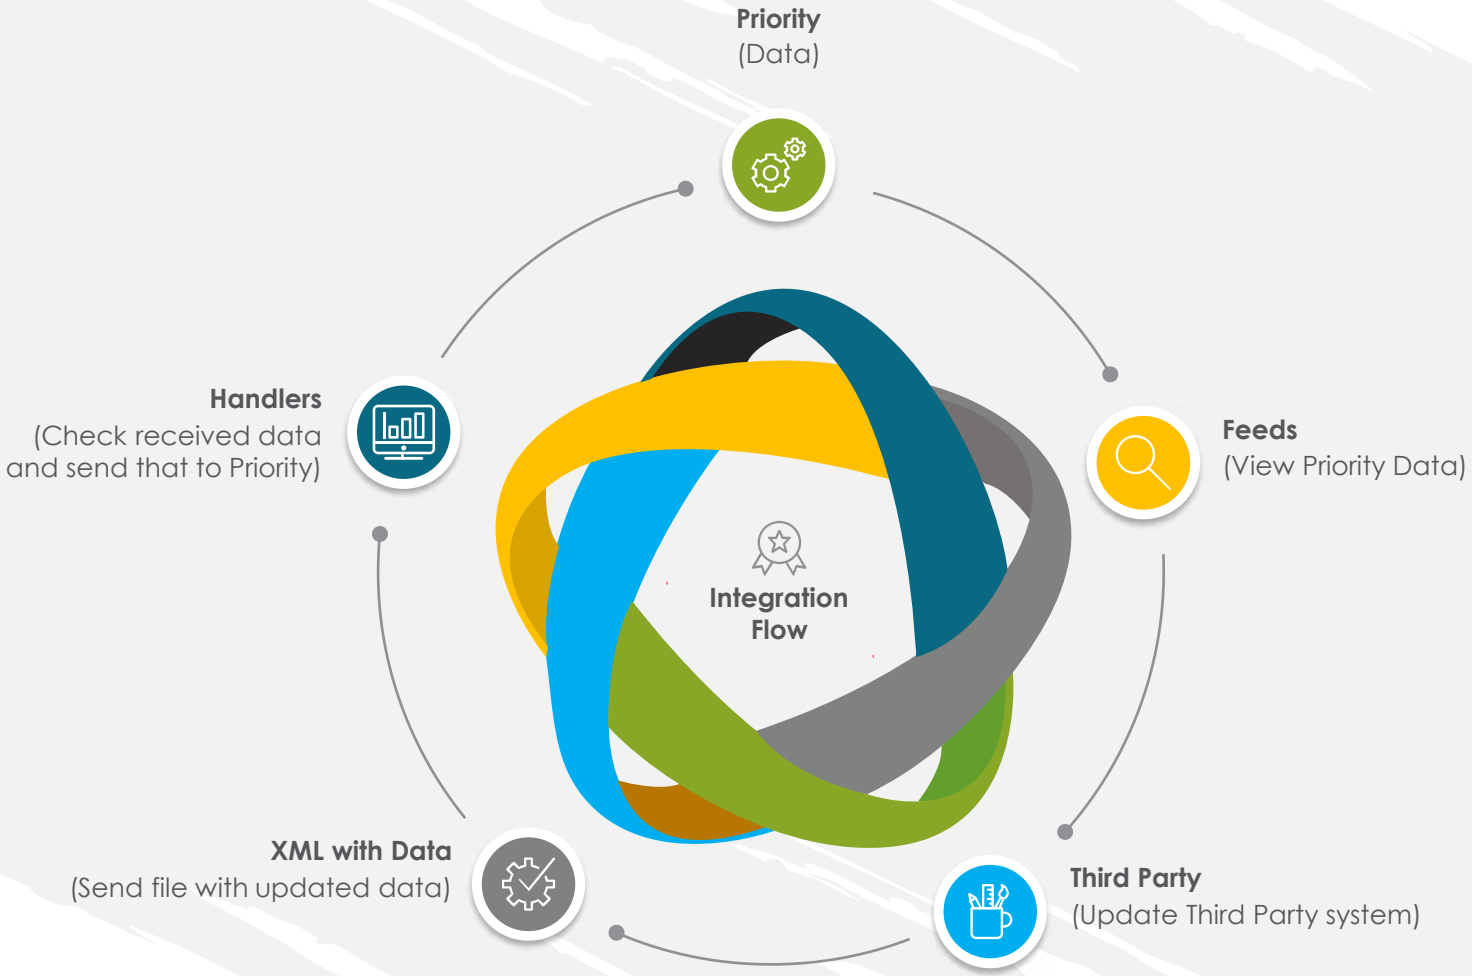
≡Forbes

2017:

The year of the API Economy.

Not just websites…

API Lifecycle



Announcing the new IIS API

using Priority Software's oData tools

MEDATECH

Announcing the new IIS API

using Priority Software's oData tools

Priority oData

A service that provides data in a format (schema) based on the fields of our customers Priority ERP

IIS API

Write to Priority using oData

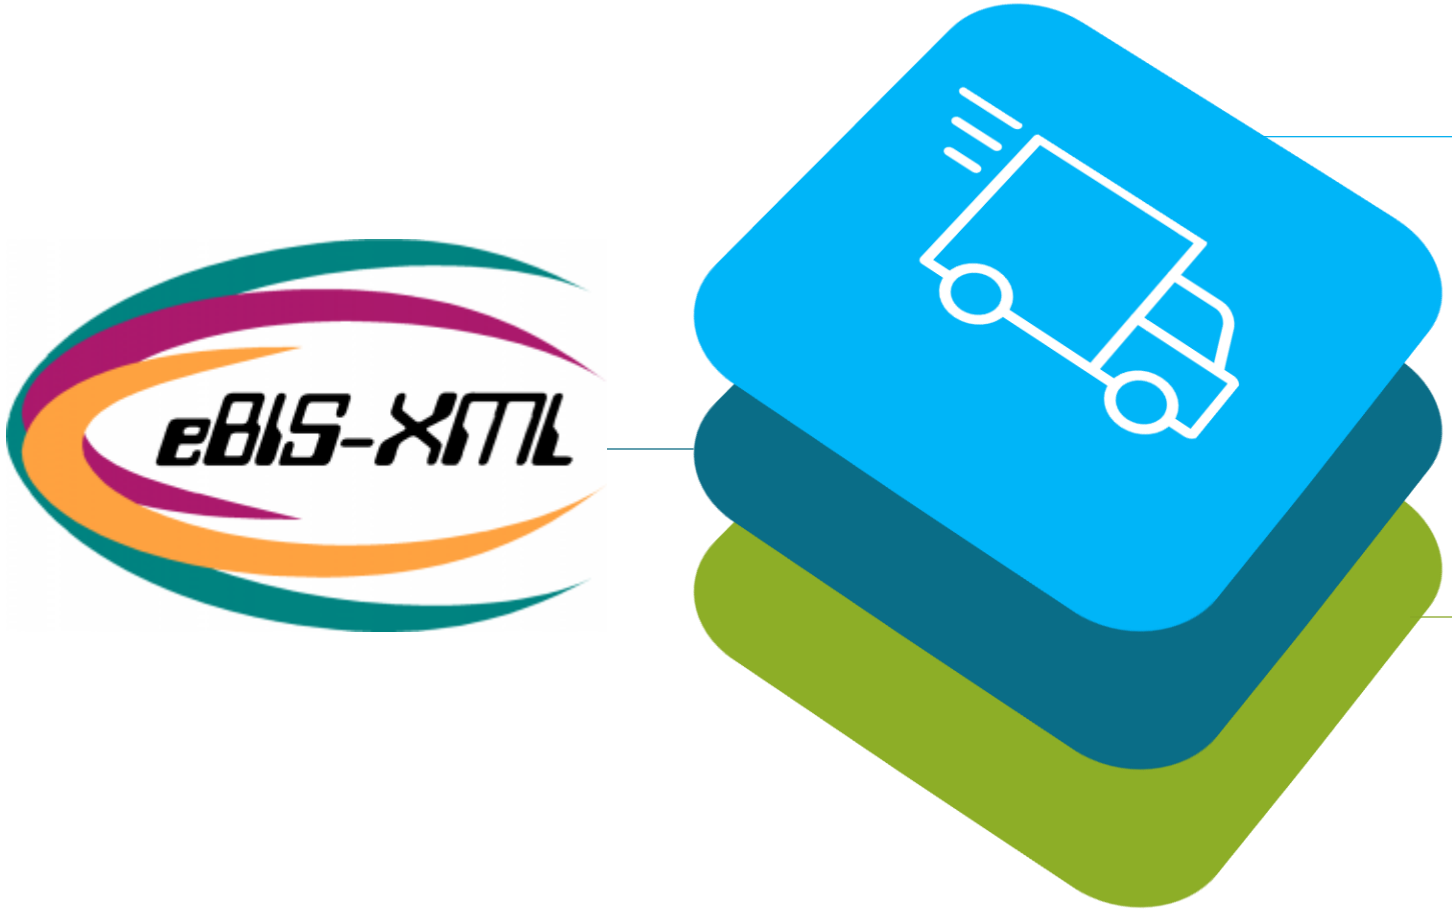
Receive data from 3rd party

3rd Party

A service that provides data in a format (schema) specified by the service

Introducing support for BASDA orders

An ecommerce example of the new API handler.



A common XML standard used by many systems

Order data is sent to the handler for processing into Priority

New projects post Version 18

- API Extensibility Framework installed as part of new Priority Installations.
- SQL Feeds can be quickly implemented to share any Priority data securely with your partners

Upgrading to Version 18

- API Extensibility Framework installed as part of the upgrade.
- Existing SQL Feeds will be converted.

MEDATECH

“Feeds”

A PULL transaction

Provides Priority data to third party applications

Based on common standard SQL database query

Cost of oData loading service

- New customers can add the oData loading service as a module to their service agreements.
- Customers with earlier versions of handlers will have then upgraded as part or process of migrating to version 18.

Licences Updates

- A commitment from Priority Software to honour existing licencing agreements
- A customer specific assessment of modules currently included in your service agreement to assist with the migration to version 18.

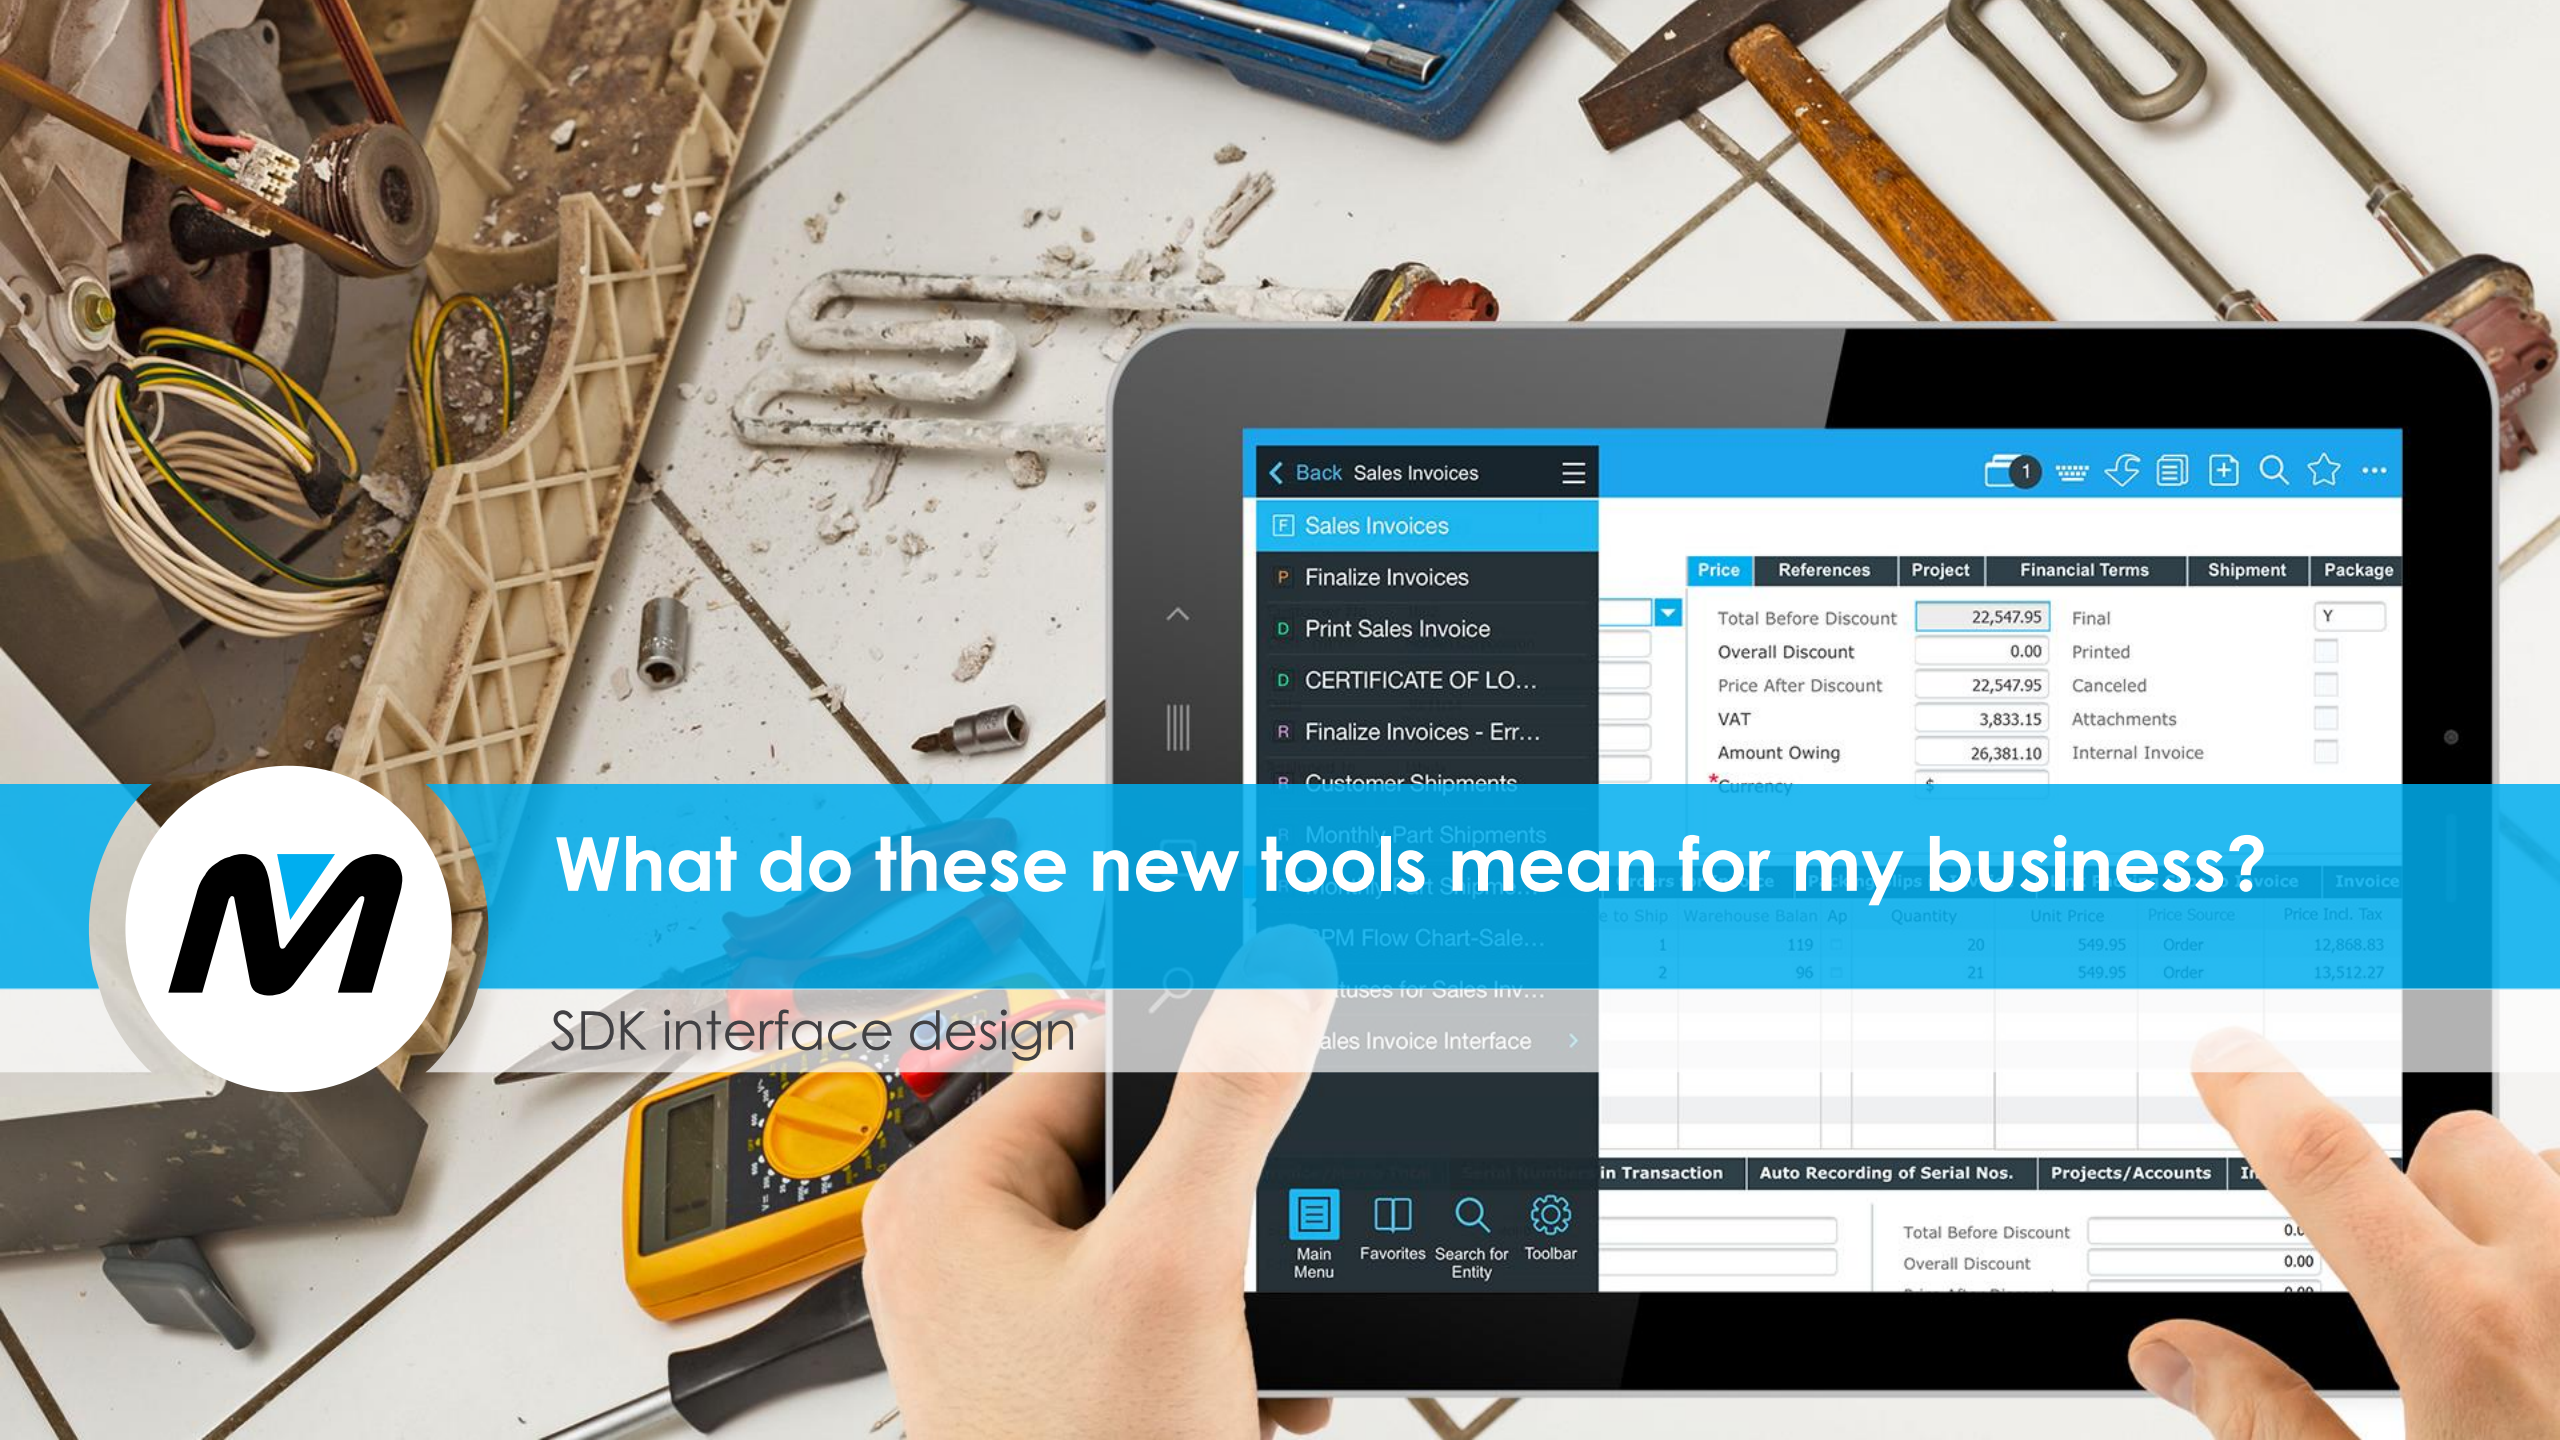
MEDATECH

“Handlers”

A PUSH transaction

Receives data from a third party application

Loads that data into Priority



What do these new tools mean for my business?

SDK interface design

App Development

The options

Rich Interface

- Full web based Priority install
- Desktop like experience
- Suited to office based power users

App Generator

- Design simple apps
- Designed In Priority
- Very powerful, covering many common usage scenarios.
- Suited to internal usage scenarios

Java SDK

- Custom development
- Suited to developments outside the scope of the app generator

MEDATECH

Java SDK

beyond the App Generator
